conservation and management of highly migratory fish resources in the EPO.

The IATTC adopted Resolution C-13-01, which establishes an annual catch limit of bigeye tuna for large U.S. longline vessels. For calendar years 2014, 2015, and 2016, the catch of bigeye tuna by longline gear in the IATTC Convention Area by fishing vessels of the United States that are over 24 meters in overall length is limited to 500 metric tons per year. With the approval of the DOS, NMFS implemented this catch limit by noticeand-comment rulemaking under the Act (79 FR 19487, April 9, 2014, and codified at 50 CFR 300.25).

NMFS monitored the retained catches of bigeye tuna using logbook data submitted by vessel captains and other available information from the longline fisheries in the IATTC Convention Area, and determined that the 2014 catch limit is expected to be reached on October 31, 2014. In accordance with 50 CFR 300.25(b), this Federal Register notice announces that the U.S. longline fishery for bigeye tuna in the IATTC Convention Area will be closed for vessels over 24 meters in overall length starting on October 31, 2014, through the end of the 2014 calendar year. The 2015 fishing year is scheduled to open on January 1, 2015. The bigeye tuna catch limit for longline vessels over 24 meters in overall length for 2015 will be 500 metric tons.

During the closure, a U.S. fishing vessel over 24 meters in overall length may not be used to retain on board, transship, or land bigeye tuna captured by longline gear in the IATTC Convention Area, except as follows:

• Any bigeye tuna already on board a fishing vessel upon the effective date of the prohibitions may be retained on board, transshipped, and/or landed, to the extent authorized by applicable laws and regulations, provided that they are landed within 14 days after the prohibitions become effective, that is, by November 14, 2014.

• In the case of a vessel that has declared to NMFS that the current trip type is shallow-set longlining, the 14day limit is waived, but the number of bigeye tuna retained on board, transshipped, or landed must not exceed the number on board the vessel upon the effective date of the prohibitions, as recorded by the NMFS observer on board the vessel.

• Bigeye tuna caught by longline gear used on a vessel of the United States over 24 meters in the IATTC Convention Area may not be transshipped to a fishing vessel unless that fishing vessel is operated in compliance with a valid permit issued under 50 CFR 660.707 or 665.801 (the rule implementing Resolution C–13–1 incorrectly cited § 665.21, which has been re-codified as § 665.801).

• A fishing vessel of the United States over 24 meters, other than a vessel for which a declaration has been made to NMFS that the current trip is shallowsetting, may not be used to fish in the Pacific Ocean using longline gear both inside and outside the IATTC Convention Area during the same fishing trip, with the exception of a fishing trip during which the prohibitions were put into effect.

• If a vessel over 24 meters that is not on a declared shallow-set trip is used to fish in the Pacific Ocean using longline gear outside the IATTC Convention Area and the vessel enters the IATTC Convention Area at any time during the same fishing trip, the longline gear on the fishing vessel must be stowed in a manner so as not to be readily available for fishing. Specifically, the hooks, branch lines, and floats must be stowed and not available for immediate use, and any power-operated mainline hauler on deck must be covered in such a manner that it is not readily available for use.

### Classification

There is good cause to waive prior notice and opportunity for public comment pursuant to 5 U.S.C. 553(b)(B). This action is based on the best available information and is necessary for the conservation and management of bigeye tuna. Compliance with the notice and comment requirement would be impracticable and contrary to the public interest because NMFS would be unable to ensure that the 2014 bigeve tuna catch limit applicable to large longline vessels is not exceeded. The annual catch limit is an important mechanism to ensure that the United States complies with its international obligations in preventing overfishing and managing the fishery at optimum yield. Moreover, NMFS previously solicited public comments on the rule that established the catch limit (79 FR 19487, April 9, 2014), including a provision for issuing a notice to close the fishery, if necessary, to prevent exceeding the catch limit. For the same reasons, there is good cause to establish an effective date less than 30 days after date of publication of this notice.

This action is required by § 300.25(b) and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 951-962 et seq.

### RIN 0648-XD354

Revisions to Framework Adjustment 51 to the Northeast Multispecies Fishery Management Plan and Sector Annual Catch Entitlements; Updated Annual Catch Limits for Sectors and the Common Pool for Fishing Year 2014

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Temporary final rule; adjustment to specifications.

**SUMMARY:** Based on the final Northeast multispecies sector rosters, we are adjusting the fishing year 2014 specification of annual catch limits for commercial groundfish vessels, as well as sector annual catch entitlements for groundfish stocks by adding carried over catch from fishing year 2013 and reducing quotas for some stocks by the amount of overages exceeding their limits in fishing year 2013, among other adjustments. This revision to fishing year 2014 catch levels is necessary to account for changes in the number of participants electing to fish in sectors. DATES: Effective October 23, 2014, through April 30, 2015.

FOR FURTHER INFORMATION CONTACT:

Allison Murphy, Sector Policy Analyst, (978) 281–9122.

SUPPLEMENTARY INFORMATION: The New England Fishery Management Council developed Amendment 16 to the Northeast (NE) Multispecies Fishery Management Plan (FMP), in part, to establish a process for setting groundfish annual catch limits (also referred to as ACLs or catch limits) and accountability measures. The Council has a biennial review process to develop catch limits and revise management measures. Framework Adjustment 51 and concurrent emergency actions set annual catch limits for nine groundfish stocks and three jointly managed U.S./ Canada stocks for fishing years 20142015. Recently, we partially approved Framework 51, which became effective on May 1, 2014 (79 FR 22421; April 22, 2014), and also approved fishing year 2014 sector operations plans and allocations (79 FR 23278; April 28, 2014; "sector rule"). A sector receives an allocation of each stock, or annual catch entitlement (referred to as ACE, or allocation), based on its members' catch histories. State-operated permit banks also receive an allocation that can be transferred to qualifying sector vessels (for more information, see the final rule implementing Amendment 17 (77 FR 16942; March 23, 2012)). The sum of all sector and state-operated permit bank allocations is referred to as the sector sub-ACL in the FMP. Whatever groundfish allocation remains after sectors and state-operated permit banks receive their allocations is then allocated to vessels not enrolled in a sector (referred to as the common pool). This allocation is also referred to as the common pool sub-ACL. This rule adjusts the both the sector and common pool fishing year 2014 sub-ACLs based

on final sector membership, which was established as of May 1, 2014.

Permitted vessels that wish to fish in a sector must enroll by December 1 of each year, with the fishing year beginning the following May 1 and lasting through April 30 of the next year. However, due to a delay in distributing each vessel's potential contribution to a sector's quota for fishing year 2014, we extended the deadline to join a sector until March 6, 2014. Because of this extended deadline, and the fact that vessels had until April 30, 2014, to drop out of a sector and fish in the common pool, fishing year 2013 membership was used to estimate sector ACEs in the Framework 51 final rule. The fishing year 2014 sector final rule, which published later than the Framework 51 final rule, used March 6, 2014, rosters to estimate sector ACEs.

The final number of permits enrolled in a sector or state-operated permit bank for fishing year 2014 is 845, which is 4 less than the March 6, 2013, roster. All sector allocations assume that each NE multispecies vessel enrolled in a sector has a valid permit for fishing year 2014. Tables 1, 2, and 3 (below) explain the revised fishing year 2014 allocations as a percentage and absolute amount (in metric tons and pounds).

Table 4 compares the preliminary allocations based on fishing year 2013 membership published in the Framework 51 proposed and final rules, with the revised allocations based on the final sector and state-operated permit bank rosters as of May 1, 2014. The table shows that changes in sector allocations due to updated rosters range from a decrease of 0.86 percent of Southern New England/Mid-Atlantic (SNE/MA) yellowtail flounder, to an increase of 0.40 percent of Georges Bank (GB) yellowtail flounder. Common pool allocation adjustments range between a 2.94-percent decrease in GB cod, to a 15.79-percent increase in redfish. The changes in the common-pool allocations are greater because the common pool has a significantly lower allocation for all stocks.

	<sup>1</sup> All valu	es for sectors ou	utlined in Table	e 4 assume that	each sector per	mit is valid for	fishing year 20	14.							

Table 4. Comparison of Allocations Between the Framework 51 Final Rule and May 1, 2014, Sector Rosters (mt)<sup>1</sup>

<sup>1</sup>All values for sectors outlined in Table 4 assume that each sector permit is valid for fishing year 2014.

We have completed fishing year 2013 data reconciliation with sectors and allowed a 2-week window for any sector with an overage to trade fishing year 2013 ACE to balance the overage. We have since determined final fishing year 2013 sector catch and the amount of quota that sectors may carry from fishing year 2013 into fishing year 2014. A recent emergency rule (79 FR 36433; June 27, 2014) described changes to carryover and catch accounting in response to litigation by Conservation Law Foundation (*Conservation Law Foundation* v. *Pritzker, et al.* (Case No. 1:13–CV–0821–JEB)). The Court invalidated the previous carryover measures because those measures failed to prevent total potential catches of certain stocks (ACEs plus carryover) from exceeding their annual biological catch (ABC). This rule ensures that catch does not exceed the ABC for any stock. Because of this, the maximum carryover for certain stocks may be lower than what a sector expects. Table 5 includes the maximum amount of quota that sectors may carry over from fishing year 2013 into fishing year 2014. Table 6 includes the *de minimis* amount of quota that sectors may carry over from fishing year 2013 into fishing year 2014.

Table 6. De Minimis Carryover ACE from Fishing Year 2013 to Fishing Year 2014 (lbs)

63571

We have determined that 9 sectors have exceeded their fishing year 2013 allocation of witch flounder, requiring reductions to those sectors' fishing year 2014 allocations. Because of the Court decision discussed above, we were required to reduce the amount of witch flounder carryover available for sectors to use in fishing year 2013. Some sectors inadvertently exceeded their fishing year 2013 witch flounder ACE and were unable to transfer a sufficient amount of quota to cover the overage. Reducing ACE by the overage amount is necessary to address the requirement to apply a pound-for-pound reduction in ACE in

the year following an overage. Table 6 includes a summary of the sectors with fishing year 2013 witch flounder overages, the initial fishing year 2014 witch flounder ACE included in Table 3, and adjusted fishing year 2014 witch flounder ACE, accounting for the overage.

# Table 7. Fishing Year 2014 Witch Flounder Overage Adjustments

	Fishing Year	Initial Fishing Year	Adjusted Fishing Year
Sector	2013 Overage	2014 Common Pool	2014 Common Pool
	(lbs)	sub-ACL (1,000 lbs)	sub-ACL (1,000 lbs)

Table 9. Total ACE Available to Sectors in Fishing Year 2014 with Maximum Carryover (1,000 lb)

Framework 51 also specifies incidental catch limits (or incidental total allowable catches, "TACs") applicable to the common pool and NE multispecies Special Management Programs for fishing year 2013–2015, including the B day-at-sea (DAS) Program. Special Management Programs are designed to allow fishing for healthy stocks that can support additional fishing effort without undermining the other goals of the FMP. Incidental catch limits are specified to limit catch of certain stocks of concern for common pool vessels fishing in the Special Management Programs. Because these incidental catch limits are based on the changed common-pool allocation, they also must be revised. Final incidental catch limits are included in Tables 10– 13 below.

## TABLE 10—FISHING YEAR 2014 COMMON POOL INCIDENTAL CATCH TACS

Stock	Percentage of common pool sub-ACL	Incidental catch TAC (mt)

SNE/MA winter flounder	0.19	0.43	0.43	0.43

Similar to the accountability measures for sectors when a quota overage occurs, if the common pool sub-ACL for any stock is exceeded, we are required to reduce the common pool sub-ACL by the amount of the overage in the next fishing year. We are reducing the fishing year 2014 GB cod and GOM haddock common pool sub-ACLs due to fishing year 2013 overages. The fishing year 2013 common pool sub-ACL for GB cod was exceeded by 8 percent (2.3 mt) and the GOM haddock common pool sub-ACL was exceeded by 118 percent (1.2 mt). Therefore, we are reducing the fishing year 2014 GB cod and GOM haddock common pool sub-ACLs due to the fishing year 2013 overages. Table 14

provides the common pool overage adjustments for these stocks. Table 15 provides the updated trimester Total

Allowable Catches (TACs) for GB cod and GOM haddock based on the final FY 2014 common pool sub-ACLs.

TABLE 14—FISHING YEAR 2014 COMMON POOL OVERAGE ADJUSTMENT (mt)	

Stock	Fishing year 2013 overage	Initial fishing year 2014 common pool sub-ACL	Adjusted fish- ing year 2014 common pool sub-ACL

GOM Haddock	0.22	0.21	0.38

We are reducing the fishing year 2014 GB haddock sub-ACL for the herring mid-water trawl fishery due to a fishing year 2013 overage. The herring midwater trawl fishery is allocated 1 percent of the U.S. ABC for each stock of GOM and GB haddock. If the herring

mid-water trawl fishery exceeds its GOM or GB haddock sub-ACL, we are required to reduce the respective sub-ACL by the amount of the overage in the following fishing year. In fishing year 2013, the mid-water trawl fishery exceeded its GB haddock sub-ACL by

16.98 mt. Therefore, this rule reduces the fishing year 2014 GB haddock sub-ACL by the 16.98 mt overage for the herring mid-water trawl fishery. Table 16 provides the herring mid-water trawl adjustments for GB haddock that this rule implements.

TABLE 16—FISHING YEAR 2014 HERRING MID-WATER TRAWL OVERAGE ADJUSTMENT (mt)

Stock	Fishing year 2013 overage	Initial fishing year 2014 her- ring mid-water trawl sub-ACL	Adjusted fishing year 2014 her- ring mid-water trawl sub-ACL
GB Haddock	16.98	179	162.02

Finally, Table 17 provides the U.S. ABCs for the three transboundary Georges Bank stocks that we jointly manage with Canada. The U.S./Canada quotas, and the corresponding ACLs/ sub-ACLs were included in the Framework 51 final rule; however, because the U.S. ABCs for GB cod, haddock, and yellowtail flounder were mis-specified, the corrected levels are being included here in this rule.

TABLE 17-U.S. ACCEPTABLE BIO-LOGICAL CATCHES FOR TRANS-BOUNDARY STOCKS

Stock	U.S. ABC (mt)	
GB Cod	1,960	
GB Haddock	19,229	
GB Yellowtail Flounder	328	

### Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the NE Multispecies FMP, other provisions

of the Magnuson-Stevens Act, and other applicable law.

This final rule is exempt from the procedures of E.O. 12866 because this action contains no implementing regulations.

Pursuant to 5 U.S.C. 553(b)(3)(B), we find good cause to waive prior public notice and opportunity for public comment on the catch limit and allocation adjustments because allowing time for notice and comment is impracticable and contrary to the public interest. We also find good cause to waive the 30-day delay in effectiveness pursuant to 5 U.S.C. 553(d)(3), so that this final rule may become effective upon filing.

Notice and comment are impracticable and contrary to the public interest because a delay would potentially impair achievement of the management plan's objectives of preventing overfishing and achieving optimum yield by vessels staying within ACLs or allocations. The proposed and final rules for fishing year 2014 sector operations plans and contracts explained the need and likelihood for

adjustments of sector and common pool allocations based on final sector rosters. No comments were received on the potential for these adjustments, which provide an accurate accounting of a sector's or common pool's allocation at this time. Prior notice of the need to distribute carryover catch was also provided. Allowing for prior notice and public comment on the herring midwater trawl overage adjustment is impracticable because this is a nondiscretionary action required by provisions of Framework 46 to the NE Multispecies FMP, which was subject to public comment. The proposed rule to implement Framework 46 requested public comment on these measures including the specific accountability measure implemented by this rule, with the understanding that possession limit trigger adjustments would be required if an ACL overage occurred. If this rule is not effective immediately, the sector and common pool vessels will be operating under incorrect information on the catch limits for each stock for sectors and the common pool. This could cause negative economic impacts

to the both sectors and the common pool, depending on the size of the allocation, the degree of change in the allocation, and the catch rate of a particular stock. Further, these adjustments are based purely on objective sector enrollment data and are not subject to our discretion, so there would be no benefit to allowing time for prior notice and comment.

Waiving the 30-day delay in effectiveness allows harvesting in a manner that prevents catch limits of species from being exceeded in fisheries that are important to coastal communities. Until the final stock allocations are made, the affected fishing entities will not know how many fish of a particular stock they can catch without going over their ultimate limits. Fishermen may make both short- and long-term business decisions based on the catch limits in a given sector or the common pool. Any delays in adjusting these limits may cause the affected fishing entities to slow down, or speed up, their fishing activities during the interim period before this rule becomes effective. Both of these reactions could negatively affect the fishery and the businesses and communities that depend on them. The fishing industry and the communities it supports could be affected by potentially reducing harvests and delaying profits. Lastly, the catch limit and allocation adjustments are not controversial and the need for them was clearly explained in the proposed and final rules for fishing year 2014 sector operations plans and contracts. As a result, the NE multispecies permit holders are expecting these adjustments and awaiting their implementation. Therefore, it is important to implement adjusted catch limits and allocations as soon as possible. For these reasons, we are waiving the public comment period and the 30-day delay in effectiveness for this rule, pursuant to 5 U.S.C. 553(b)(3)(B) and (d), respectively.

Because advanced notice and the opportunity for public comment are not required under the Administrative Procedure Act, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, do not apply to this rule. Therefore, no final regulatory flexibility analysis is required and none has been prepared.

Authority: 16 U.S.C. 1801 et seq.

Dated: October 20, 2014.

## Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service. [FR Doc. 2014–25307 Filed 10–23–14; 8:45 am]

BILLING CODE 3510-22-P

## DEPARTMENT OF COMMERCE

### National Oceanic and Atmospheric Administration

#### 50 CFR Part 679

[Docket No. 131021878-4158-02]

RIN 0648-XD565

### Fisheries of the Exclusive Economic Zone Off Alaska; Reallocation of Halibut Prohibited Species Catch Allowances in the Bering Sea and Aleutian Islands Management Area

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; reallocation.

**SUMMARY:** NMFS is reallocating projected unused amounts of the 2014 halibut prohibited species catch (PSC) allowance from the Bering Sea and Aleutian Islands trawl (BSAI) limited access sector to the Amendment 80 cooperatives in the BSAI management area. This action is necessary to allow the Amendment 80 cooperatives to fully harvest their 2014 groundfish allocations.

**DATES:** Effective October 21, 2014, through 2400 hrs, Alaska local time (A.l.t.), December 31, 2014.

**FOR FURTHER INFORMATION CONTACT:** Steve Whitney, 907–586–7269.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the BSAI according to the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679.

The Administrator, Alaska Region, NMFS, has determined that 80 metric tons of halibut PSC allowance from the BSAI trawl limited access sector will not be needed to support BSAI trawl limited access fisheries. Therefore, in accordance with § 679.91(f)(4), NMFS is reallocating this halibut PSC allowance from the BSAI trawl limited access sector to the Amendment 80 cooperatives in the BSAI.

In accordance with (579.91(f)(1), NMFS will reissue cooperative quota permits for the reallocated halibut PSC allowances following the procedures set forth in <math>(579.91(f)(4)).

In accordance with § 679.91(f)(4)(i), NMFS will reallocate 95 percent of the halibut PSC reallocated from the BSAI trawl limited access sector to the Amendment 80 cooperatives, which is 76 metric tons.

The 2014 harvest specifications for halibut PSC allowances included in the final 2014 and 2015 harvest specifications in the BSAI (79 FR 12108, March 4, 2014 and 79 FR 35958, June 25, 2014) are revised as follows in Tables 10, 12, and 14:

TABLE 10—FINAL 2014 AND 2015 APPORTIONMENT OF PROHIBITED SPECIES CATCH ALLOWANCES TO NON-TRAWL GEAR,
THE CDQ PROGRAM, AMENDMENT 80, AND THE BSAI TRAWL LIMITED ACCESS SECTORS

PSC species and area <sup>1</sup>	Total non-trawl PSC	Non-trawl PSC remaining after CDQ PSQ <sup>2</sup>	Total trawl PSC	Trawl PSC remaining after CDQ PSQ <sup>2</sup>	CDQ PSQ reserve <sup>2</sup>	Amendment 80 sector <sup>3</sup>	BSAI trawl limited access fishery
