

(d) In those cases where the pumps are found to be already in operation because of high water levels and when the natural ventilating currents are moving in the proper direction, the main mine fan will be started and running for 30 minutes before entering the mine to conduct a pre-shift examination. Examination of the mine pump installation will be completed prior to entering the active gangway level working and continuing the pre-shift examination.

The petitioner asserts that the proposed alternative method will provide no less than the same measure of protection afforded the miners under the existing standard.

Dated: November 21, 2014.

Sheila McConnell,

Acting Director, Office of Standards, Regulations and Variances.
