The Kingdom of Morocco has requested a possible sale of:

*Major Defense Equipment (MDE)*:

Six hundred (600) TOW 2A, Radio Frequency (RF) Missiles (BGM–71E–4B–RF)

Seven (7) TOW 2A, Radio Frequency (RF) Missile (BGM–71E–4B–RF) Fly-to-Buy Lot Acceptance Missiles

This proposed sale will contribute to the foreign policy and national security of the United States by helping to improve the security of a major Non-NATO ally that continues to be an important force for the political stability and economic progress in North Africa.

The proposed sale of the TOW 2A Missiles, M220A2 Launchers and technical support will advance Morocco's efforts to modernize its ground defense capability.

The principal contractor involved in this program is Raytheon Missile Systems, Tucson, Arizona. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require the U.S. Government or contractor representatives to travel to Morocco for multiple periods for equipment deprocessing/fielding, system checkout and new equipment training. Item No. vii

(vii) *Sensitivity of Technology*:

1. The Radio Frequency (RF) TOW 2A Missile (BGM–71E–4B–RF) is a direct attack missile designed to defeat armored vehicles, reinforced urban structures, field fortifications and other such targets. TOW missiles are fired from a variety of TOW launchers in the U.S. Army, USMC, and FMS customer forces. The TOW 2A RF missile can be launched from the same launcher platforms as the existing wire-guided TOW 2A missile without modification to the launcher. The TOW 2A missile (both wire & RF) contains two tracker beacons (xenon and thermal) for the launcher to track and guide the missile in flight. Guidance commands from the launcher are provided to the missile by a RF link contained within the missile case. The hardware, software, and

technical publications provided with the sale thereof are unclassified. However, the system itself contains sensitive technology that instructs the system on how to operate in the presence of countermeasures.

2. If a technology advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
