## NUCLEAR REGULATORY COMMISSION

[NRC-2015-0035]

### Natural Phenomena Hazards in Fuel Cycle Facilities

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** Draft interim staff guidance; request for comment.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) is soliciting public comment on its draft Interim Staff Guidance (ISG) for Natural Phenomena Hazards (NPH) in Fuel Cycle Facilities. Fuel cycle facility licensees are required to conduct and maintain an Integrated Safety Analysis (ISA). This analysis must examine potential accident sequences caused by process deviations or other events internal to the facility and credible external events, including natural phenomena. During inspections of selected fuel cycle facilities to confirm that the facilities were in compliance with regulatory requirements to address natural phenomena hazards, the NRC staff identified several unresolved items (URIs). The ISG provides criteria and methods that the staff can use to review the treatment of NPH at fuel cycle facilities as evaluated in the facility ISA.

**DATES:** Submit comments by April 10, 2015. Comments received after this date will be considered if it is practical to do so, but the Commission is able to ensure consideration only for comments received before this date.

**ADDRESSES:** You may submit comments by any of the following methods (unless this document describes a different method for submitting comments on a specific subject):

- Federal Rulemaking Web site: Go to <http://www.regulations.gov> and search for Docket ID NRC-2015-0035. Address questions about NRC dockets to Carol Gallagher; telephone: 301-415-3463; email: [Carol.Gallagher@nrc.gov](mailto:Carol.Gallagher@nrc.gov). ## II. Background

As a result of the lessons learned from the accident at the Fukushima Daichi Nuclear Power Plant, the U.S. Nuclear Regulatory Commission staff performed a systematic evaluation and inspection of selected fuel cycle facilities to (1) confirm that licensees are in compliance with regulatory requirements and facility-specific license conditions; and (2) to evaluate their readiness to address NPH events and other licensing basis events related to NPH. From December 2011 through May 2012, the staff conducted these inspections in accordance with NRC Temporary Instruction (TI) 2600/015, "Evaluation of Licensee Strategies for the Prevention and/or Mitigation of Emergencies at Fuel Facilities."

As a result of the TI inspection activities, the staff identified URI's related to Part 70 requirements and the current licensing basis of these facilities. The URIs document the need to further evaluate whether licensees are in compliance with regulatory requirements regarding accident sequences resulting from NPH. The staff is issuing this ISG to provide additional guidance for addressing accident sequences that may result from NPH. This ISG will be incorporated into future revisions of Appendix D of Chapter 3 of NUREG 1520, "Standard Review Plan for the Review of a License Application for a Fuel Cycle Facility" (ADAMS Accession No. ML020930033).

Dated at Rockville, Maryland, this 13th day of February, 2015.

For the Nuclear Regulatory Commission.
