

In accordance with the ToR, this study will analyze and identify the Army formations with the greatest potential to benefit from adoption of RAS technology in both the near term (7–10 years) and the long term (10–25 years). For each selected application, the study team should define the benefits of RAS, considering such factors as cost, manpower reduction, survivability, and mission effectiveness. To the extent possible, the team should make maximum use of existing platforms available in the Army, other Services, or commercially. Among the concepts being studied by the study team, for which it is seeking input are on relevant products and technologies are: Counter Integrated Air Defense (IAD) System; Counter Armor and Counter Fires System; Combat Aviation Wingman; Manned-Unmanned Armor Platoon; Multi-Mission Aerial layer System; Soldier Situational Awareness (SA) System; and Point of Need Sustainment. This is not an exhaustive list. Other concepts are of interest as well.

c. Product or Technology Description (4 pages maximum): Provide an enhanced view of the product or technology solution you are proposing, focusing on the advantages of the

product or technology and its applicability to future Army RAS competencies. The description of each solution should include the current state of development and the predicted performance levels the product or technology should reasonably achieve. Of most interest to this study is a description of the current autonomous functionality of the product, the types of human-RAS collaboration that are supported by the product, any plans to increase autonomy and collaboration, and changes required to the on-board processing architecture needed to enable these planned improvements.

d. Applicability to Future Army RAS competency (1 page only): Identify and expound upon how the product or technology supports the seven Study Concept areas mentioned above, concentrating on the added capability this solution provides that currently does not exist.
