

would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Allergy and Infectious Diseases Special Emphasis Panel; Asthma and Allergic Diseases Cooperative Research Centers.

Date: September 7–14, 2017.

Time: 12:00 p.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: The William F. Bolger Center, 9600 Newbridge Drive, Potomac, MD 20854.

Contact Person: Paul A. Amstad, Ph.D., Scientific Review Officer, Scientific Review Program, NIAID/NIH/DHHS, Division of Extramural Activities, Room 3G41, 5601 Fishers Lane, Bethesda, MD 20892–7616, 240–669–5067, pamstad@niaid.nih.gov.

(Catalogue of Federal Domestic Assistance Program Nos. 93.855, Allergy, Immunology, and Transplantation Research; 93.856, Microbiology and Infectious Diseases Research, National Institutes of Health, HHS)

Dated: August 1, 2017.

Sylvia L. Neal,

Program Analyst, Office of Federal Advisory Committee Policy.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive Patent License: The Development of a Bispecific, Biparatopic Antibody-Drug Conjugate to GPC3 for the Treatment of Human Liver Cancers

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Cancer Institute, National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an Exclusive Patent License to Salubris Biotherapeutics, Inc. (Salubris), located in Gaithersburg, Maryland, to practice the inventions embodied in the patent applications listed in the **SUPPLEMENTARY INFORMATION** section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NCI Technology Transfer Center on or before August 22, 2017 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated Exclusive Patent License should be directed to: David A. Lambertson, Ph.D., Senior Licensing and Patenting Manager, NCI Technology Transfer Center, 9609 Medical Center Drive, RM

1E530 MSC 9702, Bethesda, MD 20892–9702 (for business mail), Rockville, MD 20850–9702; Telephone: (240) 276–6467; Email: david.lambertson@nih.gov.

SUPPLEMENTARY INFORMATION: The following represents the intellectual property to be licensed under the prospective agreement: (A) U.S. Provisional Patent Application 61/654,232 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–US–01], PCT Patent Application PCT/US2013/043633 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–PCT–02], Chinese Patent Application 201380039993.7 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–CN–03], Japanese Patent Application 2015–515243 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–JP–04], South Korean Patent Application 10–2014–7037046 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–KR–05], Singapore Patent Application 11201407972R entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–SG–06], and United States Patent 9,409,994 entitled “High-affinity Monoclonal Antibodies To Glypican-3 And Use Thereof” [HHS Ref. E–136–2012/0–US–07], and all continuing U.S. and foreign patents/patent applications for the technology family; and (B) U.S. Provisional Patent Application 61/477,020 entitled “Human Monoclonal Antibody Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–US–01], PCT Patent Application PCT/US2012/034186 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–PCT–02], Chinese Patent 201280029201.3 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–CN–03], European Patent 2699603 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–EP–04], and validated in France [HHS Ref. E–130–2011/0–FR–09], Germany [HHS Ref. E–130–2011/0–DE–08] and the United Kingdom [HHS Ref. E–130–2011/0–GB–10] and lodged in Hong Kong [HHS Ref. E–130–2011/0–HK–11], United States Patent 9,206,257 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–US–05], United States Patent 9,394,364,

entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–US–06], European Patent Application 15188264.4 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–EP–07], United States Patent Application 15/090,873 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–US–12], Chinese Patent Application 201610290837.3 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–CN–13], European Patent Application 16166924.7 entitled “Human Monoclonal Antibodies Specific for Glypican-3 And Use Thereof” [HHS Ref. E–130–2011/0–EP–14], and all continuing U.S. and foreign patents/patent applications for the technology family, to Salubris. The patent rights in these inventions have been assigned to and/or exclusively licensed to the Government of the United States of America.

With respect to persons who have an obligation to assign their right, title and interest to the Government of the United States of America, the patent rights in these inventions have been assigned to the Government of the United States of America.

The prospective Exclusive Patent License territory may be worldwide for the following field of use:

The development and commercialization of a bispecific, biparatopic antibody-drug conjugate (ADC) having:

(1) The CDR sequences of both the hYP7 and HN3 anti-GPC3 monoclonal antibodies; and

(2) a microtubule inhibitor payload including, but not limited to, auristatin and mertansine;

for the treatment of human liver cancer. The licensed field of use excludes any (a) non-specified immunoconjugates, including, but not limited to, chimeric antigen receptors (CARs) and variants thereof, immunotoxins, ADCs with payloads that are not microtubule inhibitors, and monospecific versions of the aforementioned immunoconjugates, and (b) unconjugated antibodies.

The present inventions to be licensed concern monoclonal antibodies that are specific for the cell surface domain of GPC3: HN3 and hYP7. These antibodies can potentially be used for the treatment of GPC3-expressing cancers such as HCC. In the subject situation, the antibodies can be used in conjunction to target a toxic payload specifically to GPC3-expressing cells, leading to the selective destruction of the cancerous cells.

This notice is made in accordance with 35 U.S.C. 209 and 37 CFR part 404.

The prospective Exclusive Patent License will be royalty bearing and may be granted unless within fifteen (15) days from the date of this published notice, the National Cancer Institute receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.

Complete applications for a license in the prospective field of use that are timely filed in response to this notice will be treated as objections to the grant of the contemplated Exclusive Patent License. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Dated: July 25, 2017.

Richard U. Rodriguez,

Associate Director, Technology Transfer Center, National Cancer Institute.

National Institute on Aging; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute on Aging Special Emphasis Panel; Drugs Targeting Pathways of Aging.

Date: September 13, 2017.

Time: 3:00 p.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institute on Aging, Gateway Building, 2W200, 7201 Wisconsin Avenue, Bethesda, MD 20892 (Telephone Conference Call).

Contact Person: Anita H. Undale, Ph.D., MD, Scientific Review Branch, National Institute on Aging, Gateway Building, Suite 2W200, 7201 Wisconsin Avenue, Bethesda,

MD 20892, 240-747-7825, anita.undale@nih.gov.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive Patent License: MicroRNA Therapeutics for Treating Squamous Cell Carcinomas

AGENCY: National Institutes of Health, HHS.

ACTION: Notice.

SUMMARY: The National Heart, Lung and Blood Institute (NHLBI), National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an Exclusive Patent License to MiRecule, Inc., located in Rockville, Maryland, to practice the inventions embodied in the patent applications listed in the **SUPPLEMENTARY INFORMATION** section of this notice.

DATES: Only written comments and/or applications for a license which are received by the NHLBI Office of Technology Transfer and Development August 22, 2017 will be considered.

ADDRESSES: Requests for copies of the patent applications, inquiries, and comments relating to the contemplated Exclusive Patent License should be directed to: Michael Shmilovich, Esq., Senior Licensing and Patent Manager, 31 Center Drive, Room 4A29, MSC2479, Bethesda, MD 20892-2479, phone number 301-435-5019, or shmilovm@mail.nih.gov.

SUPPLEMENTARY INFORMATION: The following represents the intellectual property to be licensed under the prospective agreement: HHS Ref. No. E-043-2016/0, including provisional patent application 62/304,844 filed March 7, 2016 and International Patent Application PCT/US2017/021178 filed March 7, 2017 both entitled "MicroRNAs And Methods Of Their Use," and all continuing U.S. and foreign patents/patent applications for the technology family, to MiRecule. The patent rights in these inventions have been assigned to and/or exclusively licensed to the Government of the United States of America.

With respect to persons who have an obligation to assign their right, title and interest to the Government of the United States of America, the patent rights in these inventions have been assigned to the Government of the United States of America.

The prospective Exclusive Patent License territory may be worldwide for the following field of use: MicroRNA therapeutics for squamous cell carcinomas.

The invention relates to the use of microRNAs (miRs), miR mimics, miR mimetics, and a combination thereof as anti-proliferative cancer therapeutics. In this case, miRs will be administered in a form complexed with nanoparticles in the form of liposomes decorated with anti-transferrin receptor (TfR) scFv fragments. Generally, miRs are a highly conserved class of small RNA molecules (about 18-24bp) that primarily bind the 3'-UTR region of mRNA molecules and either block translation or promote nuclease mediated degradation. The inventors found that mimics or mimetics derived from several members of the miR-30-5p family; and miR-30a-5p and miR-30e-5p, have potential as anti-proliferative therapeutics in cancers including but not limited to squamous cell carcinomas and currently have a CRADA with NIDCD exploring their uses in treating head and neck squamous cell carcinoma (HNSC). In an *in vivo* proof-of-concept using a murine xenograft tumor model for HNSC, the inventors demonstrated that intraperitoneal administration of a nanoliposome formulated with an anti-transferrin receptor antibody fragment and a synthetic miR-30a-5p mimic strongly delayed tumor growth. Other anti-cancer miR therapeutic mimics can be combines with miR-30 including miR-145-5p, miR-26a-5p, miR-26b-5p, miR-375-5p, miR-30b-5p, miR-30d-5p, or miR-338-3p. Modes of administration can be by intravenous injection, intraperitoneal injection, subcutaneous injection, or intratumoral injection. Therapeutic design employing miR mimicry focuses on nucleic acid modifications that exhibit better cytotoxicity than unmodified miRs or commercially available mimics. For example, it is accepted that modification of the 2' position of individual nucleic acids in an oligonucleotide can improve affinity to complementary strands and confer resistance to nucleases and reduce adverse immunogenic reactions. By way of another example, bases 1, 6, and 20 of a passenger strand miR can be mutated to increase the stability of the resulting duplex; however, these mutation sites may differ from one
