

# JAXLIGHT

Recently Hollywood labs began the transition from silver to cyan soundtracks. The Jaxlight is a simple solution for this conversion. These bulbs replace projector exciter lamps. They utilize solid state LED technology and work with standard silver soundtracks, high magenta tracks, and cyan soundtracks. These bulbs deliver professional audio-sound quality and installs just as you would a light bulb.

Compatible with both conventional silver and new cyan dye soundtracks

Plugs directly into exciter lamp socket

Works with existing power supplies, slit lenses and photocells

Lowers distortion and extends frequency response

Internal circuitry accepts a wide range of AC/DC voltages

External balanced or single-ended line amp included to increase signal from photocell to preamp

Long life, economical and environmentally sound

Different versions available to accommodate most domestic and international projectors
